

**Question: Make a python script which fetches the App reviews for any app that you like**

```
In [1]: from urllib import response
import requests
from bs4 import BeautifulSoup
url = "https://play.google.com/store/apps/details?id=com.whatsapp&hl=en_IN&gl=US"
page = requests.get(url)
soup1 = BeautifulSoup(page.content, "html.parser")
#soup2 = BeautifulSoup(soup1.prettify(), "html.parser")
```

```
In [2]: reviews = soup1.find_all("div",class_ ="EGFGHd")
for name in reviews:
    print(name.text)
```

Kyle Krebsmore\_vert Flag inappropriate31 August 2022Nothing but awful audio that cuts out nonstop and very choppy video. Years and years and years of this. Hasnt gotten better even a little bit. If I had another option to communicate with the folks I'm talking to I would leave this in a new york minute. Truly the worst audio and video imaginable. Here we are in 2022. Crazy. Great job whatsapp. Way to allocate your resources and invest in your product.1,314 people found this review helpfulDid you find this helpful?YesNo

Ando Princemore\_vert Flag inappropriate21 August 2022I give it 3 stars because, I really appreciate for this app, that allows us to communicate ever abroad. However, I couldn't get any pictures or anything else to get sent. There's a box indicating that I should do the setting I did the setting and still I couldn't send pictures, it kept showing me that little box about setting, I go to setting do all the things there and nothing happens.8,484 people found this review helpfulDid you find this helpful?YesNo

Frank Butlermore\_vert Flag inappropriate4 September 2022No support. If you try and contact support it's just a bunch of unhelpful bots. I had uninstalled the app and reinstalled it to see that I have new messages, but I can't receive them. These are very important messages to me and it's just really frustrating to me that I can't retrieve them. I've tried everything in the articles. Nothing works and I can't get any real helpm188 people found this review helpfulDid you find this helpful?YesNo
